

PLC Credit Unions

PLC Partners assists credit unions in optimising their use of technology. We understand both the strategic business change drivers and their technology implications. Our specialists have extensive practitioner experience and knowledge in the credit union sector. Our independence makes the difference when facing technology challenges.

We have a proven track record with many Credit Unions, both in Ireland and abroad, and detailed knowledge of the market and available options. We are in a position to use this experience to offer a “packaged” and cost effective service.

We offer a range of practical services leveraging our independent knowledge and experience.

System Assessment

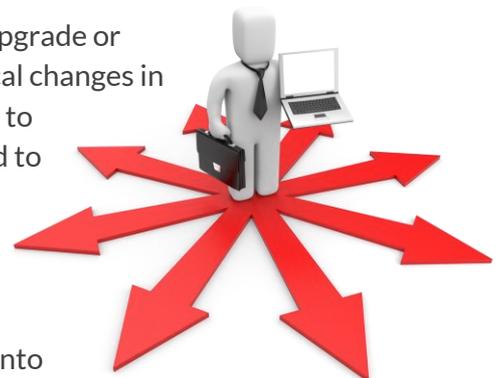

Looking for an independent assessment of your systems and your current technology risk profile? Our assessment of both your Operations and core IT systems by senior experienced professionals is short and focussed examining ongoing operations, vendor management and ability to meet current and future requirements.

We report on system observations, key challenges, gap analysis and recommendations that are practical, achievable, driven by real need and will include cost- saving opportunities.

Systems Selection

Credit Unions like most organisations face agonising decisions to upgrade or replace their application systems, and even more so now with radical changes in compliance and regulatory upheaval. Other change drivers are due to product innovation, vendor imposed release cycles and the demand to be close to the most recent system version.

We assist your organisation to identify the most suitable solution that matches your current and future requirements through a rigorous analysis and procurement process. Our framework takes into account the return on investment, business benefits, risk avoidance, and flexibility to ensure a practical and cost effective solution is procured.

Deployment Project

Once the decision is made to upgrade or replace the current systems, the assignment of a project manager, internal or external, is vital to the success of the project. The complexity is often increased due to the need to identify and retrofit the local, site-specific functionality back into the new version of the software, the integration into several 3rd party and legacy systems, and end user business processes that span multiple applications.

The PLC Partners Method helps to ensure the most rapid and efficient project deployment success. We can deploy the specialists to bridge the gap between your available resources, solution needs and vendors, to ensure the successful, quality and efficient deployment of the chosen solution.

Business Continuity Planning

The goal of an effective business continuity plan and recovery process is to facilitate and expedite the resumption of business after a major disruption. Disruptions may include instances where normal functions and services cannot be performed and may not be performed for an extended period of time.

We provide the insight and advice to develop a Business Continuity Policy and Recovery Plan that will assist your credit union in the event of disruption. Our Business Continuity & Recovery Planning process identifies critical data systems and business functions, analyses the risks and impacts and develops a unique and practical plan to enable those systems and functions to be resumed quickly post disaster.

We develop a road map of predetermined and pre-arranged actions that reduce required decision-making and actions during the stress of recovery operations, when exposure to error is at a peak.
