

Project Deployment

Challenge

Upgrade or replacement projects can be extremely complex and of large effort. The complexity is often increased due to the need to identify and retrofit the local, site-specific customisations back into the new version of the software, the integration into several 3rd party and legacy systems, and end user business processes that span multiple applications.

Rising to the Challenge

Employing multi-skilled teams that follow a proven method and are tightly managed by industry professionals help to ensure the most rapid and efficient project deployment success.

How we Assist

PLC Partners' consultants have been deeply involved in projects of this nature, and are experts in the design, setup and management of major programmes and projects.

By working closely in a partnership mode with our clients we gain a thorough understanding of their business issues and objectives before we set about designing the most appropriate programme to ensure the most seamless delivery of their desired solutions.

We can deploy a team of experts to bridge the gap between your available resources, solution needs and vendors, to ensure the successful, quality and efficient deployment of the chosen solution.

Benefits

PLC Partners adopts a project management approach based on PMI® to services delivered which result in benefits, such as:

- ◆ Improving return on investment
- ◆ Release internal resource to focus on business as usual
- ◆ Reduction of risk
- ◆ Quality and timely delivery
- ◆ On demand solution teams with international reach with multi-lingual resources
- ◆ The highest levels of deployment experience

Note: PMI® is a registered certification mark of the Project Management Institute, Inc.
